

Lumension®

Patch Manager DeskTop for Microsoft® System Center

Security is Complex.
Patching with
Microsoft® System
Center Shouldn't Be

Users demand a host of 3rd party applications be installed on their endpoints to ensure productivity – applications like Adobe Reader, Java JRE, and various browsers like Chrome and Firefox.

With these applications come more vulnerabilities – in fact, recent data suggest that over 75% of all endpoint vulnerabilities are found in these 3rd party applications. No wonder that 66% of IT administrators responding to the 2014 State of the Endpoint report by the Ponemon Institute stated that staying current on needed third-party patches is one of the most significant risks they face. IP, is worth billions to some.

System requirements

- Microsoft® System Center Configuration Manager (SCCM) 2012 or higher
- Microsoft® Windows Software Update Services (WSUS) 3.0 SP2 or higher
- Microsoft® System Center Updates Publisher (SCUP) 2011 or higher

Introducing Lumension® Patch Manager DeskTop

Lumension® Patch Manager DeskTop is the only enterprise-class 3rd party patching solution designed exclusively for Microsoft® System Center environments that require operationally efficient and reliable patching solutions for security and compliance.

It provides simplified patching for the most at-risk 3rd party enterprise applications on Windows® desktops from within your System Center environment. While SC supports native Windows® applications well, the manual process for 3rd party enterprise applications is cumbersome and time consuming.

Lumension provides a broad content catalog to easily extend SCCM capabilities for 3rd party enterprise application patching using your existing, established workflow without requiring additional management overhead. Organizations using Lumension® Patch Manager DeskTop will improve security and compliance for their SC environments.

Ask us for a free trial.

Lumension® Patch Manager DeskTop provides organizations using Microsoft® System Center with:

- **A streamlined process** for patching 3rd party enterprise applications using existing deployment workflow and existing
- **Powershell automation**, and without requiring additional management overhead.
- **Reduced risk of targeted attacks** by decreasing the attack surface through automated patching of 3rd party enterprise applications across the SC environment—from Data Center to Desktop.
- **Assurance** that all endpoints have been properly patched and are fully compliant.
- **Reduced operational reporting** and audit burden through security and compliance reporting.
- **Broadest coverage** of the most at-risk, the most relevant (most prevalent / most targeted) 3rd party enterprise applications.

Features

Streamlines 3rd Party Application Patching in SCCM, bridging the gap between IT Security and Operations

Provides Patch Content for most prevalent and at-Risk 3rd Party Applications used in enterprises, ensuring compliance beyond Microsoft® OS and native applications.

Increases Enterprise Patch Deployment Reliability, reducing IT burden and overall cost.

Supports Enterprise Versions of 3rd Party applications, providing the enterprise-class patching required to ensure security and compliance.

Delivers In-depth Enterprise Vulnerability Information, supporting enterprise-level compliance and security reporting and auditing needs.

Supports Specific Application Versioning, allowing organizations to maintain compliance with internal policy and external regulations.

Utilizes Secure / Centralized Content Repository, improving security and reducing the bandwidth and time requirements on IT.

Validates Quality Assurance, improving compliance by ensuring both patch applicability and post-installation status.

Offers Multi-Language Content, supporting global enterprises.

Why Lumension® Patch Manager DeskTop

1. Reliable: Lumension takes the guess work out of 3rd party patch management in your System Center environment utilizing proprietary Patch-Smart™ technology. You will achieve greater 1st time patch installation success with Lumension® Patch Manager DeskTop, which delivers the most enterprise-class patch content coverage for applications from Adobe, Apple, VMware, Citrix, and other at-risk 3rd party enterprise applications.

2. Flexible: Lumension® Patch Manager DeskTop uses only native System Center tools to give IT administrators total control when deciding what patches to deploy and on what systems. It provides coverage for both business and consumer versions of applications where applicable. Automated enterprise patching of 3rd party enterprise applications Microsoft® System Center with granular control.

3. Smart: IT administrators will spend less time deploying 3rd party patches, and less time rebuilding failed patches – this means improved compliance, more time to spend on more strategic initiatives, lower barriers to fully patching vulnerable 3rd party enterprise applications, and ultimately a lower total cost of ownership. And the in-depth security information and other metadata not normally available with 3rd party patches will result in better compliance and improved audit results.
